

Problems on Partial Differential Equations

By

Maciej Borodzik, Tomasz Cieślak, Piotr B. Mucha, Piotr Rybka,
Witold Sadowski, Paweł Strzelecki, Agnieszka Tarasińska and
Anna Zatorska–Goldstein

reworked, expanded and translated by

Maciej Borodzik, Paweł Goldstein, Piotr Rybka and Anna Zatorska–Goldstein

Contents

Introduction	7
The content of the chapters	9
About the authors	9
Notation	11
1 Preliminaries	14
1.1 Integration by parts	15
1.1.1 Theoretical background	15
Basic formulas	15
Surface integrals	16
A quick review of differential forms	16
1.1.2 Worked out Problems	19
1.1.3 Problems	23
1.2 Convolutions	26
1.2.1 Theoretical background	26
1.2.2 Worked out Problems	27
1.2.3 Problems	32
1.3 Bibliographical remarks	36
2 Distributions, Sobolev spaces and the Fourier transform	37
2.1 The Fourier transform	38
2.1.1 Theoretical background	38
The Schwartz space	38
The Fourier transform	39
Properties of the Fourier transform	39
Parseval's identity and Plancherel's Theorem	41
2.1.2 Worked out Problems	42
2.1.3 Problems	47
2.2 The theory of distributions	51
2.2.1 Theoretical background	51
Distributional derivatives	52
Tempered distributions	53
Convolutions	54

	Fundamental solutions	54
2.2.2	Worked out Problems	55
2.2.3	Problems	57
2.3	Sobolev spaces	60
2.3.1	Theoretical background	60
	Sobolev spaces $W^{m,p}$	60
	Spaces $H^s(\mathbb{R}^n)$	63
	Spaces $H^s(\Omega)$	64
	Duality and the spaces $W^{-m,p'}(\Omega)$	65
	Trace of a Sobolev function	66
	Embedding theorems	68
2.3.2	Worked out Problems	71
2.3.3	Problems	77
2.4	Bibliographical remarks	82
3	Common methods	83
3.1	Weak convergence	85
3.1.1	Theoretical background	85
	Weak convergence in Hilbert spaces	85
	Dual spaces	91
	Weak and weak* convergence in Banach spaces	93
	Banach space-valued functions	95
3.1.2	Worked out Problems	96
3.1.3	Problems	98
3.2	The separation of variables method	103
3.2.1	Theoretical background	103
	Hyperbolic Problems	103
	Comments on the regularity of u given by formula (3.21)	106
	Hyperbolic Problems: a non-homogeneous case	107
	Parabolic Problems	108
3.2.2	Worked out Problems	109
3.2.3	Problems	113
	Hyperbolic equations	113
	Parabolic equations	115
3.3	Galerkin method	118
3.3.1	Theoretical background	118
3.3.2	Worked out Problems	118
	The first example: a linear elliptic equation	119
	The second example: the heat equation with a nonlinear force	124
3.3.3	Problems	129
3.4	Bibliographical remarks	131

4	Elliptic equations	132
4.1	Classical theory of harmonic functions	133
4.1.1	Theoretical background	133
	Definitions	133
	Green's functions	134
	Holomorphic functions and harmonic functions	136
	Subharmonic functions	137
	General elliptic operators	137
4.1.2	Worked out Problems	139
	The Laplace operator in different coordinate systems	139
	Green's functions	142
	Harmonic and holomorphic functions	143
4.1.3	Problems	144
	Harmonic functions – basic properties	144
	The Laplace operator in different coordinate systems	147
	Green's functions	147
	Harmonic and holomorphic functions	148
	Subharmonic functions	148
4.2	Weak solutions	151
4.2.1	Theoretical background	151
	Physical motivation	151
	Weak formulation	153
	Variational approach on Hilbert spaces	154
	Lax-Milgram's Lemma	155
	Regularity of weak solutions	156
4.2.2	Worked out Problems	157
4.2.3	Problems	163
4.3	Bibliographical remarks	170
5	Evolution equations	171
5.1	First order equations and the method of characteristics	172
5.1.1	Theoretical background	172
	The characteristic system	173
	Admissible boundary conditions	176
	Noncharacteristic initial conditions	177
	Local solutions	178
5.1.2	Worked out Problems	180
5.1.3	Problems	187
5.2	Hyperbolic problems	191
5.2.1	Theoretical background	191
	Duhamel's formula	194
5.2.2	Worked out Problems	194
	The wave equation	194

	Duhamel's formula	197
	Hyperbolic systems of the first order	198
	The use of the Fourier transform	199
	Energy estimates and uniqueness	199
5.2.3	Problems	202
	The wave equation	202
	Hyperbolic systems of the first order	205
	Hyperbolic equations of the second order, considered more generally	206
	The use of the Fourier transform	207
	Energy estimates and uniqueness	209
5.3	Parabolic equations	212
5.3.1	Theoretical background	212
	Heat equation	212
	Linear second order parabolic equations	215
	Weak solutions	216
5.3.2	Worked out Problems	217
5.3.3	Problems	221
5.4	Bibliographical remarks	227

Bibliography	228
